

Centralized data hub with Odoo for new connections

Superior fiber and copper connectivity products have been Nexconec's mission since the network for data centers, telecommunications, and enterprise applications. The Hong Kong based company also has operations in China, Latin America, and France where they capitalize on superior engineering, manufacturing, and customer service capabilities.

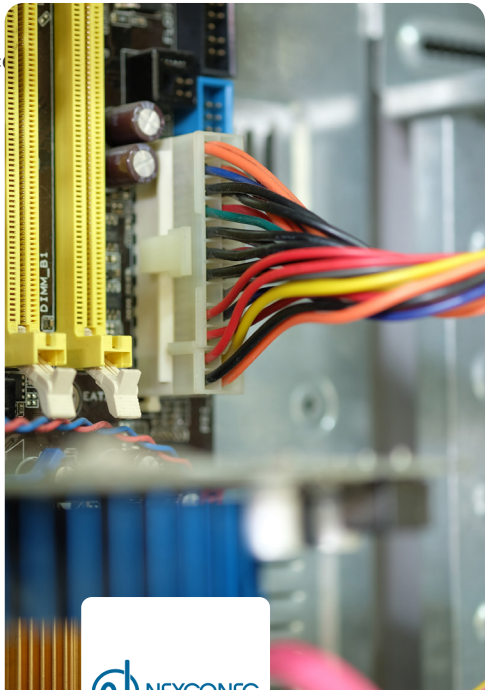

Turning the page on a tedious system

Before switching to Odoo in 2018, Nexconec reported data and gathered information with spreadsheets and stored them remotely. Daily manual updates and sharing required at least four verification steps with high chances of errors.

As it was tedious and time-consuming, the company soon realized it needed to upgrade to a centralized and integrated solution. Attracted by Odoo's applications, the cable industry leader was convinced by the customizability of the solution to fit its specific needs.

Maintaining success from anywhere in the world

Nexconec experienced significant benefits from implementing Odoo, resulting in improved data organization and timely updates, facilitating seamless communication with suppliers, customers, and team members. The company's saw enhancements, reducing inventory costs and streamlining operations. With Odoo's can now analyze previous years' targets for sales. The software's quickly adapt to it. As a result, Nexconec's time to focus on their core activities, while also benefiting from the ability to work from home.
